

Studio — Owner's Manual

Everything Studio does, in the order you'd actually use it. Updated August 2026 · build b0807

The one rule that explains everything: Studio has two kinds of actions. **FREE** is everything that edits, assembles, styles, cuts, captions, or exports — use it as much as you want, forever, no cost. **COSTS** is only AI *generating* — making new pictures, animating a still into video, AI voice, lip-sync, and the one-time face-lock training. Every paid button shows its price before you tap it, and nothing ever spends without a click.

Turning on AI (one time)

The header shows **AI READY** when it's on. If it doesn't: ⚙️ **Settings** → **Turn on AI**, paste your fal.ai key. That key is what paid actions spend from. While you're in Settings, set a **Daily spend cap** — it makes going over impossible.

Check your build: the small number in the header should read `b0807` . If it's lower than the number Claude just told you, your browser is running old files — go to **Profile** → **Update my app**, then restart Studio.

The six tabs

Tab	What it's for
 My Media	Your library. Everything you upload, generate, or render lands here — and every tool lives on the item itself.
AI Scenes	Type a description, get a picture. COSTS
Characters	Face-lock: teach Studio your face once so it's the same person in every video.
Sequencer	Where pictures + music become a finished video. Also holds Quick Make and the template gallery.
 Post	Scripts, the teleprompter, the webcam recorder, and your posting schedule.
 Settings	Keys, spend cap, storage, backup, updates, guide.

Recording yourself (free, start here)

- 1 Post tab** → paste your script → **Save script**.
- 2 ► Open teleprompter**. Set the speed — it goes down to half-steps if the normal slow is still too fast.

- 3  **Record my webcam.** Options before you start: countdown (3s/5s/10s), background blur or replace, and photo mode.
- 4 Read it. Look at the lens, not the words — glance down only between lines. Tap to stop.
- 5 It lands in **My Media**. Then: **transcribe** →  **Reframe 9:16** → ✨ **Master for release** → ↓ **Download**.

Looking natural: record two or three takes back to back and keep the third. The first is stiff, the second is careful, the third is you.

My Media — every tool, what it does, and what it costs

Motion & shape FREE

Button	What it does
Motion (pictures)	Sends the picture to the Sequencer for Ken Burns motion — slow push, pull, pan, drift.
Loop	Stretches a short clip by playing it forward, backward, forward. No jump at the seams.
Slow-mo	Half speed.
 Motion blur	Blends neighbouring frames so fast movement smears silky and hard cuts read softer.
Mirror	Flips left-to-right.
Freeze	Grabs a still out of a clip so you can reuse the moment as a picture.
Crop / Cut	Trim a picture's edges / cut a clip's length.
Sound	Swap or adjust a clip's audio.
 Green screen	Shot on a solid colour? Drop yourself onto any picture or clip.
 Reframe	Turns anything into vertical 9:16, square 1:1, or wide 16:9. <i>Fill</i> crops to the frame; <i>blur</i> keeps the whole shot with a blurred background so nothing is cut off.

Finishing FREE

Button	What it does
 Polish my video	One tap: cinematic grade + sharpen + loudness master. Best on a finished render.
 Look	Six colour themes for the whole clip — Dark Luxury, Neon Night, Cinematic, Warm Film, Vibrant, Black & White.
 Dynamics	Ten CapCut-style beat effects. See the next page — this is the big one.
2× sharper	Doubles a picture's resolution.
 Clean audio	De-noise, de-rumble, even out the volume. Great for phone-recorded narration.
 Master for release	Full repair + a release-ready 48kHz/24-bit file that uploads anywhere.
 Take the voice out	Lifts the sound off a clip into its own audio file, cleaned up. Reuse it as narration.

AI on an item

COSTS

Button	What it does & roughly what it costs
Animate	Turns a still into moving video. Draft \$0.05/sec · Standard \$0.07/sec (this is Kling 2.5 Turbo Pro) · Best \$0.24/sec (save it for hero shots).
Sing	Lip-syncs a face to audio.
 Shots	Generates coverage — extra angles of the same scene.
 QC	AI checks a shot for off-model faces, bad hands, continuity slips.

Money rule: a 5-second shot costs about **\$0.44** all-in (picture + Standard animate). A 5-shot, 25-second AI video is roughly **\$2.20**. Use Draft or Standard — never "Best" for social.

🔥 Dynamics — the CapCut-style effects

Tap 🔥 **Dynamics** on any **video or picture**. A picture becomes a moving clip — pick how long (4, 6, 8, 10 or 15 seconds). A video keeps its exact length and its music in sync. Every one makes a **new copy**; your original is never touched. All free, no AI.

Hit speed — Fast (1s), Normal (2s), Slow (4s) — sets how often the effects punch. Match it to your song.

Template	What it looks like
🔥 Beat Mix	Rotates clean → black-and-white punch → thermal heat-vision → glow pulse, with a white flash on every beat. The closest thing to a full CapCut edit in one tap.
⚡ B/W Strobe	Black-and-white hits landing on the beat.
💜 Color Flip	Vivid purple colour flips on the beat.
🔥 Thermal	The whole clip in red-orange heat-vision.
✨ Glow Up	Soft dreamy glow around the subject.
👤 Echo Trails	Movement leaves ghost trails behind it.
📱 Hype Shake	Handheld camera-shake energy with beat flashes.
🌀 Mirror World	Kaleidoscope mirror split.
🕒 Time Machine	First half plays as a worn old photo — sepia, film grain, dark corners — then a white flash, and it returns sharper and more vibrant than the original. Works on pictures and video.
🕒 3-2-1 Opener	Big countdown numbers over your first three seconds.

Stack them. Run Beat Mix, then run 3-2-1 Opener on the result. Each pass is another free copy.

Sequencer — pictures + music → video

Quick Make (the fast path)

- 1 **Add your pictures** (and clips, if you have them).
- 2 **Add music** — import a song or pick one from your library.
- 3 **Tap a premade look** — see the table below. It sets the motion, timing and transitions for every shot at once.
- 4 **Assemble** → wait → **download**.

Look	Feel
------	------

 Punch	Fast beat cuts, hard zooms — trending-short energy.
 Hype	Shake + zoom, hard cuts. Highest energy.
 Cinematic	Slow pushes and blends — story feel.
 Smooth	Gentle floating drift — calm and emotional.
 Quote hold	One long slow push per card. Built for text cards.
 Reveal	Pull back, dip to black, push in. Built for before/after.

You can also **save your own template** once you've dialled a look you like, and re-apply it later.

Ken Burns — the slow push on a still

Per shot you choose the **move** (push in, pull out, pan, drift), the **strength** (0.08 up to Max 0.70), the **direction**, and the **duration** (up to 60 seconds).

If motion is cutting off your text cards

Set that shot's fit to **pad** instead of crop. Pad keeps the whole picture in frame and adds bars; crop fills the frame and trims the edges. Text cards want pad — nothing gets chopped.

Captions & on-screen text

Transcribe first, then set **size** (small / medium / large) and **width** (60–92% of the frame, default 80). If captions cover your face, drop to small and narrow the width — the words wrap instead of running off the edge.

Size governs every kind of text, not just captions: the words Quick Video puts on each picture, title cards, and burned-in captions all follow it, at matching sizes. Each text overlay still has its own slider if you want one line bigger than the rest — that scales relative to the Size setting. Changing Size or Width redraws the previews straight away.

Output sizes

Six shapes (vertical 9:16, square 1:1, wide 16:9, classic 4:3, portrait 4:5, ultrawide) × four resolutions (720p, 1080p, 1440p, 4K). Vertical 1080p is the right default for TikTok, Reels and Shorts.

Characters — face-lock

Do this once and every AI video afterwards has the same face instead of a stranger each time.

- 1 **Characters tab** → new character → upload **2–6 clear photos** of the same person, different angles, good light.
- 2 Train the face-lock. **COSTS** — one time, and it's the single best money you'll spend in Studio.
- 3 From then on, attach that character to your image generations and animations.

Already trained a face somewhere else? Paste the LoRA URL and its trigger word straight into the Characters tab — no retraining.

AI Scenes — making pictures

- 1 Type what you want to see. Be specific: who, where, light, mood, camera.
- 2 Pick the model — cheapest is fine for testing, better ones for keepers.
- 3 End every prompt with your style line so all your videos match:
cinematic photograph, shot on 35mm, shallow depth of field, moody realistic lighting, muted color grade, documentary realism, vertical 9:16
- 4 Generate. It lands in My Media, ready to Animate or send to the Sequencer.

Prices per picture: around \$0.035 basic · \$0.07 GPT-Image · \$0.09 with your face-lock · \$0.15 top-tier. The button shows the real number before you tap.

Post tab

- **Scripts** — paste and save; the teleprompter reads from here.
- **Teleprompter** — adjustable speed with half-steps at the slow end, and a mirror-friendly band you can still see yourself past.
- **Webcam recorder** — countdown, background blur or replace, photo mode.
- **Schedule** — plan what goes out when, and mark things done or skipped.

Housekeeping

Space

Settings → **Storage** shows what you're using. Delete anything you've already downloaded and posted — deleting from the library removes the file from your computer, so download first if you want to keep it. Renders are the big

files; source pictures are small.

Backup

Settings → **Backup** saves your library and settings. Do it before an update.

Updating

Profile → **Update my app**, then restart Studio and reload the page. Confirm the build number in the header changed. If a button you were told about isn't there, the build number is why.

Money control

- **Daily spend cap** in Settings — a hard stop, not a warning.
- **fal receipts** in Settings — every paid generation with an estimated cost and a running total.
- Check your fal balance before a batch. Batch AI work in one sitting rather than a few a day.

Subscription question, settled (August 2026)

Don't buy a Kling or Runway subscription at your volume. Studio's **Standard** animate already uses Kling 2.5 Turbo Pro — the same engine those \$32/month plans sell. Pay-per-use runs about \$0.44 a shot, so 4–5 AI videos a month costs \$13–26 and a quiet month costs nothing. Break-even against a subscription is roughly **6 minutes of animated video per month**. Go past that regularly and it's worth revisiting.

Studio · Owner's Manual · August 2026 · build b0807. Free: assembling, cutting, transitions, captions, looks, Dynamics, polish, reframing, mastering, templates, export, backups. Costs money: AI pictures, Animate, AI voice, lip-sync, face-lock training — always priced on the button before you tap.
