

Play Store — live status

Read this first, before anything else in this folder. It is the record of what is actually done in Play Console, so nobody re-walks finished ground.

■ LIVE — released 26 Aug 2026, 7:59 AM

Turn Someday Into Day One, release 2 (1.0.1), is Available on Google Play. Production track, full rollout, 177 of 177 countries, 20,237 supported devices. Package com.turnsomedayintodayone.app. Developer: Jacques Malone (personal account, ID 4619499919117466586).

Everything in the old "Open" section below is **closed** — closed testing, production access, data safety and the health declaration all cleared and the app shipped. That history is kept at the bottom for reference only. Do not re-walk it.

Open — 26 Aug 2026, 11:20 AM

■ CLOSED TODAY (confirmed in the console, not assumed)

What	Evidence
Full description (keyword pass)	Box reads 3925/4000 , ends "addicted for 38 years and free at 50"
Short description	Box reads 78/80 , "Addiction recovery: sober day counter, 90-day program, and support for family."
Screenshots — Climb added, stale Friendly removed	6 panels live
Everything sent + published	Publishing overview empty, "Last published August 26, 2026"
Developer name → "Turn Someday Into Day One"	Banner: " <i>Your new developer name is being reviewed</i> " — Jacques's own name comes off the listing when Google approves, 1–2 days

Do not re-walk any of the above. Two separate loops happened today because the description was confirmed "done" before it was checked, then rewritten and re-pasted. It is right now.

■ BLOCKED UNTIL THE CURRENT REVIEW CLEARS

Google greys out the asset Upload button while a submission is in review ("Changes in review" shows at the top of the Default store listing page). Confirmed on screen 26 Aug, 11:30. Both uploads below are blocked by this — it is not a broken button and there is no workaround. Wait for the review to clear, then upload. Do not send Jacques round this loop again.

1. ■ Upload 07-chat.png (optional)

The re-shot Friendly panel — header reads **Pro · 30/day**, footer **30 of 30 chats left**, caption says "in Pro". Add as panel 7; Play allows 8 and 6 are used. Not urgent: nothing currently on the listing is untrue without it.

2. ■ Upload the new feature graphic (optional)

screenshots/feature-graphic-1024x500.png, rebuilt 26 Aug. The old one said the app's name and nothing else — no category, no reason to install. The new one adds: "*Addiction recovery, one day at a time — with a whole side*

for the one who loves you."

2b. ■ Store listing video — DONE

content/store-video.mp4 — 26s, 1080x1920, a real screen recording of the live app (not stills): day counter -> SOS sheet -> The Climb -> Tools -> Friendly -> home, five captions, brand end card, scored.

Jacques confirmed 26 Aug 2026: the video is done. It is on the channel and the listing's Video field is handled. Do not ask him to upload it again.

(For reference only, if it is ever replaced: Play's Video field takes a **YouTube URL only** - public or unlisted, ads off, not age restricted.)

How it was built (for the next rebuild): Playwright recordVideo drives a seeded Pro account against a local server, then captions are overlaid. NOTE: this ffmpeg build has **no drawtext filter** - captions must be rendered as transparent PNGs and overlaid, the same way tools/make-film.py does it.

3. ■ Content rating — confirm the user-interaction answers

Policy and programs → **App content** → **Content rating** → **Manage**. Rooms means "users interact" and "users share content" must both be **Yes** (moderation: yes, AI-checked before posting). Friendly is an AI, not a user — not user-to-user; answer yes only to an AI-generated-content question. If already answered that way, close the tab. Fixing it is not a release.

4. ■ Buy Pro on a real phone, from the live listing

Never tested. Closed testing is a different billing path. Install from Play, buy, confirm days 16+ unlock and Friendly opens, cancel.

5. ■ Billing Library 8 — CLOSED, already updated

Jacques, 26 Aug 2026: "it's already updated, no extension." The shell is on a current Billing Library. There is no Oct 31 deadline — the extension that was granted was the **Android 16 target-SDK** one (31 Aug → 1 Nov). The app shipped to Production with the console warning standing, which proves it never blocked a release. Detail in HANDOFF.md. **Do not request an extension, do not plan a rebuild for it, and do not present it to Jacques as news.**

6. ■ Title keyword — decided against, revisit only if installs climb

Turn Someday Into Day One (25/30) carries no search term, and the title is Play's heaviest ranking field. Kept anyway: that name is on the business cards, the domain, the YouTube channel and the end card of every video. Splitting the store name off from all of it to chase a head term he cannot win yet is a bad trade. Day One: Sober & Recovery (25) is the alternative if he ever wants it.

Remember the shape of this app

The Android build is a **TWA shell that loads the website**. Everything shipped through Railway (claude/vibe-code-uwxxlk) reaches Play users with no new bundle and no review — that is how v5.3, the letter invites and the new web pages all reached users on launch day itself.

A Play upload is only needed for shell-level changes: billing library, icon, package config, target SDK.

Closed history (do not re-walk)

What	When
------	------

App created, closed test running	28 Jul
All 10 App content declarations	28 Jul
Screenshots (first captioned set) published	9 Aug
Data safety: Diagnostics unticked, 12 types ticked / 8 counted	9 Aug
Health apps declaration — wellness group, personal account stands	9 Aug
Closed testing complete — 38 testers vs target 15, day 16 of 16	14 Aug
Production access granted	Aug
IARC content rating live	26 Aug
Released to Production	26 Aug, 7:59 AM

App content declarations live under **Monitor and improve** → **Policy and programs** → **App content** → **Actioned tab**, which is not where any documentation says to look.

The "8 data types collected or shared" line is **not** a count of ticks — ephemeral data is not "collected" in Play's sense. Twelve ticked, eight counted. Reading that 8 as a tick count raised a false alarm on 9 Aug; do not repeat it.
