

Nia Photo Story — Exact Task Record and Reproduction Recipe

Scope and status. This document records only the Nia task. It does not include commands or assets from the earlier Dee/Tyler task. The Nia task stopped when the tenth image call was rejected for reaching the daily image-generation limit. Consequently, **nine source scenes and one corrected variant of scene 1 exist; scene 10, a music track, an edit script, and a final MP4 do not exist.** No media is recreated by this document.

1. Workspace and actual file structure

The workspace creation command that was actually run was:

Bash

```
mkdir -p /home/ubuntu/nia-photo-story
```

The following is the exact file inventory at the time this record was written. All existing image files are RGB PNGs at **768 × 1344 pixels** (a 9:16 vertical frame). There are no subdirectories, audio files, video files, subtitle files, or ffmpeg scripts in this task workspace.

Plain Text

```
/home/ubuntu/nia-photo-story/  
├─ 01_nia_sunday_morning.png  
├─ 01_nia_sunday_morning_clean.png  
├─ 02_nia_hands_listening.png  
├─ 03_church_through_windscreen.png  
├─ 04_nia_in_drivers_seat.png  
├─ 05_childhood_photo_on_fridge.png  
├─ 06_empty_glass_in_sink.png  
├─ 07_nia_on_bed_edge.png  
├─ 08_nia_washing_dishes.png  
├─ 09_nia_with_friends_at_table.png  
└─ nia_task_reproduction_recipe.md
```

The intended asset names, including the unavailable final scene, were as follows.

Scene	Intended filename	Actual status
01	01_nia_sunday_morning.png	Generated, then superseded by the cleaned variant below.

01 correction	01_nia_sunday_morning_clean.png	Generated; this was the preferred identity reference for subsequent image calls.
02	02_nia_hands_listening.png	Generated.
03	03_church_through_windscreen.png	Generated.
04	04_nia_in_drivers_seat.png	Generated.
05	05_childhood_photo_on_fridge.png	Generated.
06	06_empty_glass_in_sink.png	Generated.
07	07_nia_on_bed_edge.png	Generated.
08	08_nia_washing_dishes.png	Generated.
09	09_nia_with_friends_at_table.png	Generated.
10	10_nia_open_doorway.png	Not generated. The request was sent but rejected because the image-generation limit had been reached.

2. Image-generation parameters and continuity method

Every initial image-generation call used the following parameters:

Parameter	Value
Model	default
Quality	default
Aspect ratio	9:16
Transparent background	Empty / disabled

Shot 1 used no reference image. Shots 2–9 used 01_nia_sunday_morning_clean.png as their single visual reference. The attempted shot 10 used two references: 09_nia_with_friends_at_table.png and 01_nia_sunday_morning_clean.png .

The exact continuity clause was deliberately repeated in every shot prompt without changes:

NIA: Black trans woman, early 30s, shoulder-length braids, gold hoop earrings, soft round face, oversized cardigan.

3. Exact image prompts sent, verbatim

01 — Sunday morning

Output path requested: /home/ubuntu/nia-photo-story/01_nia_sunday_morning.png

Plain Text

Create a cinematic vertical documentary photograph for a consistent ten-image n

01 correction — removal of readable refrigerator materials

The original 01 output had refrigerator materials that did not meet the requested no-text constraint. It was therefore refined, without changing Nia's identity or the rest of the scene, to /home/ubuntu/nia-photo-story/01_nia_sunday_morning_clean.png .

Refinement model and quality: default / default

10 — Nia in open doorway

Output path requested: /home/ubuntu/nia-photo-story/10_nia_open_doorway.png

References requested: /home/ubuntu/nia-photo-story/09_nia_with_friends_at_table.png ,
/home/ubuntu/nia-photo-story/01_nia_sunday_morning_clean.png

Generation result: the call was rejected before an image was produced.

Plain Text

Create a cinematic vertical documentary photograph for a consistent ten-image n

4. Requested caption plan

The following caption and timing plan came from the task specification. It was **not** burned into a video in this Nia task.

Order	Shot key	Camera treatment	Duration	Transition	Caption
1	01_sunday	Still	5.0 s	cut	I didn't leave God.
2	02_hands	Zoom in	5.0 s	cut	The room left me.

3	03_church	Zoom in	5.0 s	cut	I transitioned at twenty-nine. That building stopped at twenty-eight.
4	04_windscreen	Still	5.0 s	cut	I still park across the street some Sundays.
5	05_photo	Zoom in	5.0 s	cut	I know every word they're singing in there.
6	06_glass	Zoom in	5.0 s	cut	What I was actually after was the quiet.
7	07_bededge	Still	5.0 s	cut	One drink bought an hour of not defending myself.
8	08_dishes	Still	5.0 s	cut	My body still remembers the songs. That's what makes it hard.
9	09_friends	Still	5.0 s	cut	I'm not a faithless woman. That was never the problem.
10	10_doorway	Zoom out	5.0 s	cut	So I stopped waiting on that door, and found one that opened.
11	99-free-end	Still	3.0 s	cut	No caption; the instruction was double line captions for the

					captioned shots.
--	--	--	--	--	------------------

The intended total runtime was **53 seconds**: ten five-second shots and one three-second end hold.

5. ffmpeg command record

No ffmpeg command was run in the Nia task. No video assembly, Ken Burns / zoompan processing, subtitle burn-in, audio mixing, encoding, or probing occurred. Therefore there are no actual Nia-task command lines to reproduce or report.

This is intentionally not substituted with the command set used in the earlier Dee/Tyler task, because that would misrepresent what occurred in this task.

6. Music prompt and generation status

The requested music brief was:

Plain Text
slow hymnal organ, distant wordless choir pad, long sustained chords, sacred an

Track status: no music track was generated. No music-generation tool call was made in the Nia task, because production paused immediately after the scene-10 image-generation call was rejected. As a result, there is no generated music filename, no sample rate, no channel count, and no audio duration to report.

7. Final-MP4 technical settings

No final MP4 exists for the Nia task. Consequently, there is no actual final-video frame rate, resolution, video codec, video bitrate, audio codec, audio bitrate, sample rate, or audio channel configuration to document.

The only media settings actually produced were the image settings listed below.

Asset type	Actual settings
Existing still images	PNG, RGB, 768 × 1344 pixels, 9:16 vertical
Image generation model	default
Image generation quality	default

Video file	Not created
Audio file	Not created

8. Reproduction requirements and limitations

To recreate the intended sequence on another machine, you will need the nine existing PNGs listed above, a newly generated tenth image using the exact shot-10 prompt, a newly generated music track from the supplied music brief, a subtitle file containing the caption plan, and an ffmpeg edit command or script that renders ten five-second segments plus the final three-second hold.

The original generation system did not return a seed, sampling parameters, model-version identifier, or deterministic replay token. Therefore, even with these prompts and reference images, a newly generated tenth shot or recreated first nine shots will not be pixel-identical to the original outputs. Identity consistency was managed by reusing

01_nia_sunday_morning_clean.png as the reference image for scenes 2–9 and by using scenes 09 plus 01 clean as references for the attempted scene 10.

The only task interruption was the rejection of the scene-10 image request after the free-plan generation quota was reached. The later user instruction was to wait, after which this documentation task replaced media production. No additional images, music, or video were created.
