

Music library — what each track is and where it goes

One card per track. Add a card the day a track arrives, not later — nine instrumental beds all called "underscore" are impossible to tell apart in a library list a week from now.

How to fill in the "Sound" line: whoever adds the card usually cannot listen to the file (Claude can read a file's length and format, not hear it). So Sound is Jacques's line. Everything above it is measured from the file.

Face Yourself

File	Face_Yourself.mp3
Length	~15 seconds
Format	MP3, small file — a clip or a hook, not a full track
Sound	<i>(Jacques to fill in)</i>
Vocals?	<i>(assumed yes, from the title — confirm)</i>
Use for	Not narration episodes. See below.

Where this can and cannot go. If it has a vocal, it cannot sit under any of the nine episodes — words under narration means two voices competing and the viewer hears neither. A vocal track needs a piece with **no narration**: a milestone montage, a wordless cut with on-screen text only, or the last three seconds behind a CTA card.

At ~15 seconds it is a sting, not a bed. That is a real use, not a lesser one: a 15-second hook is exactly the length of an intro under a title card, or a standalone short with three lines of on-screen text and nothing spoken.

Low Pitch Symphony Underscore

File	Low_Pitch_Symphony_Underscore.wav
Length	1 minute 40 seconds
Format	WAV, stereo, 48kHz 16-bit — uncompressed, 19 MB
Sound	<i>(Jacques to fill in)</i>
Vocals?	No — it is an underscore

Use for	Episode 8, The Empty Chair (substances / spiritual) first choice. Also fits Episode 1, The Gambler .
---------	--

Why those two. Both are built on dread that arrives quietly rather than loudly — a man adding up bank statements, a man not getting out of a car. A low sustained bed does that work without asking the viewer to feel anything specific. It would fight the warmer episodes (The Hoodie, The Second Dinner), which need something with a pulse.

It is long enough for any episode. Ten shots at 5 seconds is 50 seconds plus a 3-second card — 53 in total, so this covers a full episode with 47 seconds spare. Use **■ Fit shots to song length** only if you want the film stretched to the whole track; otherwise let it run under and fade.

One practical note on the WAV. 19 MB uncompressed is fine for editing and wasteful to keep many of. Studio handles it either way, but if you end up with a dozen WAV beds, that folder grows fast — the auto-backup only covers the database, not the media folder.

Template — copy this for the next track

```
## <name>

| | |
|---|---|
| **File** | `<filename>` |
| **Length** | |
| **Format** | |
| **Sound** | |
| **Vocals?** | |
| **Use for** | |
```

The rule worth keeping: a track with words never goes under a track with narration. Everything else is taste.
