

Your clients leave on a Friday. Then what?

The ninety days after discharge decide your outcomes, and they happen where you can't reach. This is a free app your clients keep in their pocket for those ninety days — and the first one built to also hand something to the family sitting in your waiting room.

WHAT YOUR CLIENTS GET — FREE, FOREVER

- A 90-day program that starts the day they leave you
- Tools for the worst ten minutes: breathing, grounding, a hands-free voice that talks them through it
- A private journal nobody can read — no moderation, no deletion
- A day counter that never shames a slip
- Works with no account and no name. No card. No ads. Ever.

WHAT YOUR PROGRAM GETS

- Continuity for 90 days past discharge, with your name on it
- A real handout for the family program — the piece nobody else has
- Nothing to administer, install, or support
- No client data leaves the client's phone to us or to you
- Printable cards and a QR code for the discharge folder

Zero of 160 recovery apps are built for the family.

We checked the entire category on the Play Store in August 2026. Every app serves the person using. Not one serves the wife, the husband, the mother in your family session — the people you send home with a pamphlet. This app has a whole side built for them: what to say, what not to carry, and how to help without disappearing.

WHAT IT COSTS YOUR PROGRAM

PROGRAM	MONTHLY	INCLUDES
Sober living / recovery residence (up to 20 beds)	\$99	Unlimited residents & families
IOP / outpatient	\$199	Unlimited clients & families
Residential (20–100 beds)	\$349	Unlimited clients, families, alumni
Multi-site	Let's talk	Per location, discounted

First five programs: ninety days free. No card, no contract, cancel by replying to an email. All I ask in return is one honest conversation at the end about whether it helped your people — and if it did, permission to say your name.

Built by Jacques Malone. I was addicted for thirty-eight years and got free at fifty. I built this because everything I could find cost money I didn't have or was written by someone who had never done it. I use it myself, every day. If it isn't right for your program, tell me what your people would need and I'll build that instead.
