

Keyword & Search-Term Research

Turn Someday Into Day One · 1 September 2026 · built from live search research and 2,500 scraped competitor reviews

Read this before you use any number in here.

Semrush returned no data. The account is active but has no API units left, so there are **no search volumes anywhere in this report**. Every figure you see is counted from your own scraped files or came from published research, and each one says where it came from. Nothing is estimated. Top up at semrush.com/mcp-access and the volumes can be filled in against the companion file **KEYWORDS.csv**, which is built to take them.

WHAT WENT INTO THIS

Source	What it gave
Live web research	Google, TikTok, Reddit and AI-search behaviour, Sep 2026
Your review scrape	2,500 reviews across 25 apps (scraper-output/reviews-top25.csv)
Your app scrape	160 Play Store listings (scraper-output/apps-metadata.csv)
Your site	46 live pages audited for coverage
Semrush	nothing — out of API units

1. The shift that matters most

A Google search averages **3.4 words**. A ChatGPT prompt averages about **60**. People now paste their whole situation in and expect an answer back, and Google's AI Overviews trigger *more* often on long, question-shaped queries — not fewer.

Your 46 pages are written for the 3.4-word world. The eight questions below are the shape people actually type now. None of them has a page.

The question people type	Where you stand
how do I stop drinking without going to AA	Your app is the non-AA answer. Nothing says so.
is it normal to still want to drink after a month sober	Tower floors 21 and 25 already answer this.
free app to count days sober without a subscription	Your free tier is the differentiator.
how to help someone who doesn't want help	Big supporter question, no page.
what do I do at 2am when I want to relapse	SOS exists in-app but nothing is indexable.
my partner says they will stop but they never do	partner-drinks.html is close, wrong phrasing.
how do I know if I am an alcoholic or just drink a lot	Only the partner angle is covered.
what happens to your body when you quit drinking day by day	Covered — your strongest AI page.

2. What real users actually say

Counted from your own scrape of 2,500 reviews. This is not opinion — it is the literal frequency of two-word phrases people wrote about competitor apps.

Phrase	n	Phrase	n
screen time	50	doesn't work	18
mental health	31	far good	18
quit smoking	31	social media	18
keep track	21	user friendly	17
works well	19	best ever	16
smoke free	19	premium version	14
every day	19	every time	14
highly recommend	19	helped lot	13
free version	18	years ago	13
new update	18	free trial	12

"screen time" is the single most common phrase in the whole scrape (50 mentions), and six of the 25 apps are screen-time apps. Phone and social-media addiction are tracked inside your app and have **no page at all**. That is the widest open door in this document.

3. What they complain about — your positioning

From the 581 one- and two-star reviews. Complaints are worth more than praise: they are the sentences a competitor's customer types into a search box right before they leave.

Complaint	n	Complaint	n
doesn't work	13	years ago	8
screen time	13	mental health	8
every time	9	user friendly	7
free trial	9	many ads	7
pay wall	8	quit smoking	7
free version	8	new update	6
cancel subscription	8	customer service	6

165 reviews (7%) mention price, paywalls, subscriptions or refunds — and 66% of those are one- or two-star. "pay wall", "free version", "cancel subscription" and "free trial" all rank in the complaints. Your free tier is not a feature on a list. It is the loudest unmet demand in 2,500 reviews of your competitors.

4. Play Store title words your rivals buy

Counted across 160 competitor Play listings. On Google Play every word in the title, short description and long description is a ranking signal — so these are the words the category is fighting over.

Word in title	Apps	Word in title	Apps
quit	44	smoking	13
tracker	33	eating	12
recovery	22	counter	11
sober	21	sobriety	10
habit	21	anxiety	10
porn	18	gambling	7
addiction	15	drinking	7
time	15	mental	7
screen	14	health	7

5. The gaps, in priority order

#	Gap	Why it is worth doing
1	IWNDWYT	r/stopdrinking's motto — "I Will Not Drink With You Today". It is exactly what your daily pledge does. It appears nowhere on your site.
2	Phone / screen time / social media	Top phrase in the scrape. Tracked in the app, no page.
3	Free, no subscription	The loudest complaint about every rival. Say it out loud.
4	"my wife drinks"	Every supporter page you have is written for a woman about a man.
5	Gaming, shopping, work, anger	Four more tracked addictions with no page each.
6	"quit drinking app"	The head commercial term, only hit sideways by alternative pages.
7	Dopamine detox cluster	Rank for the words — but your spec bans brain-chemistry claims, so never write "research shows".

6. The apps this was measured against

Worth knowing what the scrape is and is not: 25 apps, and not all of them are your competitors. Ten are direct rivals, six are screen-time apps, five are mental-health apps, and MyFitnessPal and Calm are in there too. The review language is directionally right for the category — treat the screen-time and mental-health signals as adjacent, not identical.

App	App	App
ActionDash: Screen Time Helper	MindDoc: Mental Health Support	Smoke Free - quit smoking now
Amaha: Mental Health Therapy	MyFitnessPal: Calorie Counter	Sober Time - Sober Day Counter
BetterHelp - Therapy	Quit Tracker: Stop Smoking	Sobriety Counter - EasyQuit
BetterMe: Mental Health	QuitNow: Quit smoking for good	StayFree - Screen Time
Brainbuddy: Quit Porn Forever	Quitzilla: Quit Habit Tracker	Unchained: Quit Porn with Faith
Calm - Sleep, Meditate, Relax	Rootd - Anxiety & Panic Relief	YourHour : Screen Time Control
Everything AA	Screen Time - Parental Control	minimalist phone® Screen Time
I Am Sober	ScreenZen■Screen Time Control	
Loop Habit Tracker	Seed: Gamify No Nut Quit Porn	

Companion file: [store-listing/KEYWORDS.csv](#) — 83 terms tagged yes / NO / partial against your 46 live pages, with an empty volume column ready for Semrush once units are topped up.
